XOR

Revolutionise Your Cybersecurity

XOR (Extended Operations & Response), Antarex's unified cybersecurity platform, is a powerful all-in-one solution for organisations seeking to enhance their cybersecurity posture. With advanced threat detection, automated response, and continuous monitoring across all layers of infrastructure, XOR provides comprehensive protection to stay ahead of evolving cyber threats.

**AntareX**

Product Features

Detect

Log Data Collection
XOR collects logs from endpoints, network devices, cloud services, and third-party systems via XOR agents and APIs for continuous monitoring and efficient incident response.

Threat Correlation
XOR detects abnormal patterns and responds to security incidents in real time by analysing logs and cross-referencing threat intelligence.
Mitigate

Automated Incident Response
XOR initiates pre-configured actions like isolating systems, terminating malicious processes, and blocking threats to mitigate incidents instantly.

Analyse

Reporting and Analytics
XOR provides real-time dashboards, incident summaries, and detailed security reports, ensuring full visibility into your cybersecurity posture.

Benefits

Comprehensive Cybersecurity Solutions

XOR provides a unified Security Operations Center (SOC) with XDR, EDR, active response, and vulnerability assessment, seamlessly integrated into ISP networks to protect infrastructure and end users.

Proactive Threat Defense

With advanced threat detection and real-time blocking, XOR reduces ransomware, malware, and botnet incidents by up to 85%. It also enables effective ransomware eradication, eliminating bad actors from your environment.

Rapid Incident Response

Receive incident response and notification within 60 seconds to ensure immediate action against threats.

Proactive Automation

Automate tasks and actions based on business needs, while leveraging continuous vulnerability scanning to stay updated on patches and prevent malware.

How It Works

Comprehensive Threat Detection
XOR continuously monitors logs and network activity using XOR agents, behavioral analysis, and threat intelligence to detect anomalies such as lateral movement and suspicious activities, enabling proactive threat identification.

24/7 Threat Monitoring & Response
Providing round-the-clock monitoring and automated incident response, XOR ensures continuous threat detection, rapid investigation, and swift containment to protect against cyberattacks.

End-to-End Security
By integrating and monitoring endpoints, cloud services, firewalls, and network devices, XOR offers comprehensive protection across the entire IT infrastructure.

Advanced XDR & EDR Capabilities
XOR integrates Extended Detection and Response (XDR) and Endpoint Detection and Response (EDR), delivering holistic visibility and rapid response across multiple environments.

Automated Remediation
XOR Agent automatically executes pre-configured remediation actions such as terminating malicious processes, disabling compromised user accounts, and blocking suspicious IP addresses.
